Double-Click on Macro Name to Copy It to One of Your Templates

ColumnHeadingsForPageBreaks

Description: Inserts copies of column headings for tables that appear on more than one page.

ConvertTables

Description: Finds a table, selects it, converts it to tabbed text, and repeats the procedure throughout the document.

FindTable

Description: Finds a table, performs actions on the table, and looks for another. To make the macro perform

specific actions on a table, edit or record in the middle of the macro to perform those actions. As is, the macro merely finds the next table.

TableCalc

Description: Performs one of five types of table arithmetic. Highlight a row or column of numbers in a table, and then choose Table Calculation from the Table Menu. New

results replace old results.

TableCalcEnhanced

Description:
Enhances TableCalc by giving user a choice of result for each row and column or one result for the entire selection (as in TableCalc).
